What Does DigiScope Do?

DigiScope allows Exchange Administrators, Corporate Counsel, Legal Service, and Data Recovery firms to open multiple native Microsoft Exchange *.EDB database files or Outlook PST files simultaneously **WITHOUT** the need to utilize Microsoft Outlook, Exchange Recovery Servers, Recovery Storage Groups (RSG's), or a live Exchange server.

The DigiScope operator can then:

1. **Recover** entire stores, mailboxes, or individually selected items to a live production Exchange server.
2. Design and run quick or advanced queries to **find/discover** the desired information.
3. **Export** the search results or if desired, entire stores, mailboxes, or individually selected items into PST, XLM, or MSG formats.

Who Should Use DigiScope?

Any professional or organization with the need to find, restore, undelete or extract historic and live data created and managed by Microsoft Exchange will find DigiScope indispensable due to its ease of use, flexibility, power, and ability to open native EDB and PST files. In particular:

Exchange Administrators who need to:

- Recover data from inconsistent EDB files.
- Find and restore corrupt or deleted messages, contacts, appointments, or complete mailboxes from backups or snapshots of Exchange EDB's.
- Support legal professionals in eDiscovery cases requesting data from live Exchange servers and historical backups.

Corporate Counsel that need to:

- Produce responses to eDiscovery requests for information stored in the Microsoft Exchange environment.
- Investigate internal complaints involving email such as sexual harassment between employees or other HR related issues.

Legal Services or Data Recovery Firms that need to:

- Harvest data or find evidence from historical Exchange backups and live Exchange servers.
- Extract custodian mailboxes from large sets of Exchange database backups (EDB's).

System Requirements

- Windows XP, Vista Windows 7, or Windows 2000, 2003, 2008 Server
- Intel® Pentium®-class processor
- Required RAM: 256 MB Minimum.
- 25 MB of free hard disk space for installation (more disk space will be needed for processing EDB, STM and Log files)
- Monitor with 800 x 600 or higher screen resolution.

Supported Exchange Versions

- Microsoft Exchange 5.5, 2000, 2003, 2007 and 2010.

What Are The Benefits Of Using DigiScope?

Exchange Administrators - benefit from easy-to-use and far more efficient restore capabilities compared to the tools provided with Exchange. They also benefit from the Search/eDiscovery features since they will be the first people asked to spend their valuable time to produce messages in a discovery situation.

Corporate Counsel and other Legal Professionals - benefit from easy-to-use search/discovery and export features enabling them to quickly investigate complaints involving email and respond efficiently and cost-effectively to discovery requests involving live data as well as data within the historical backups of Exchange message stores.

Legal Services and Data Recovery firms - benefit from DigiScope's ability to efficiently search and process (single or multiple copies of) native EDBs into PST's and other formats.
